

AQSA

DevOps Engineer | DevSecOps | Cloud Engineer

Location: Peshawar, Pakistan | Phone: +92 333 4408591 | Email: aksawadood@gmail.com

LinkedIn: [linkedin.com/in/aqsa---3149782a2](https://www.linkedin.com/in/aqsa---3149782a2) | GitHub: github.com/aqsa890

PROFESSIONAL SUMMARY

Results-driven Engineer specialized in DevOps, DevSecOps, and Cloud Infrastructure. Hands-on expertise architecting automated CI/CD pipelines with GitHub Actions, containerizing microservices with Docker, and hardening multi-tier platforms to achieve 0 Critical/High vulnerabilities using Trivy and Docker Scout. Proficient in AWS cloud infrastructure, automating deployments via Bash/Python, integrating shift-left security gates (SAST, DAST, SCA, Secret Scanning, Linting), and monitoring system health.

EDUCATION

Bachelor of Science in Software Engineering (BSSE) — City University of Science and Information Technology (CUSIT)

Peshawar, Pakistan | 2022 – 2026 | CGPA: 3.86 / 4.00 (High Honors)

Focus on Software Architecture, Database Design, Operating Systems, Computer Networks, and Cloud Computing.

TECHNICAL SKILLS

DevSecOps & Security:	SAST, DAST, SCA, Secret Scanning, Container Security, Linting, IaC Security, Trivy, Gitleaks, Docker Scout, SonarQube, Semgrep, Checkov, Actionlint, Quality Gates, Shift-Left Security
CI/CD & Automation:	GitHub Actions, Jenkins, Self-Hosted EC2 Runners, Multi-Job Pipelines, Dynamic SHA-Based Tagging, Docker Hub Registry, Argo CD (GitOps), Automated Testing & Linting Workflows
Containers & Orchestration:	Docker, Docker Compose, Kubernetes, Helm, Multi-Stage Builds, Image Optimization, Container Hardening, Non-Root Workloads, Alpine/Distroless Runtimes
Cloud & Infrastructure (AWS):	AWS (EC2, VPC, S3, IAM, ALB, Auto Scaling Groups, NAT Gateway, Security Groups, NACLs, SSM, Route Tables, Launch Templates, User Data, AWS CLI)
Observability & SRE:	Prometheus, Grafana, Health Checks, Metrics Collection, Uptime & System Monitoring, Automated Alerting, Service Reliability, Incident Troubleshooting
IaC & Systems Automation:	Terraform (Declarative IaC), Ansible (Config Management), Linux Administration (LVM, SSH, Process Management, Storage), Bash/Shell Scripting, Python Automation, Nginx Reverse Proxy, Cron Jobs
Version Control & Workflow:	Git, GitHub (Branch Protection, Pull Requests, Pre-Commit Hooks), Jira, Agile / Scrum, SDLC

DEVOPS, DEVSECOPS & CLOUD PROJECTS

Atelier Storefront — Full-Stack E-Commerce & Containerized Platform [\[GitHub Repository\]](#)

Technologies: Docker, Multi-Stage Builds, FastAPI (Python), React, MongoDB Motor Async, Nginx Gateway, Pytest, Vitest

- Architected production containerization with multi-stage Docker builds and Alpine runtimes, reducing frontend image size by 75% and backend to 60MB.
- Engineered automated GitHub Actions CI/CD workflows executing linting, unit test suites (Pytest + Vitest), and dynamic SHA-based Docker Hub image publishing.
- Constructed native MongoDB schema validation (\$jsonSchema) and compound indexing guaranteeing sub-millisecond query execution and zero transactional inventory drift.
- Configured production Nginx reverse proxy with SSL termination, gzip compression, and security headers.

Cloud-Native MicroDevSecOps — Microservices Hardening & Vulnerability Remediation [\[GitHub Repository\]](#)

Technologies: Trivy, Docker Scout, Gitleaks, Python/FastAPI, React SPA, PostgreSQL Alpine, Nginx Gateway

- Hardened distributed 5-tier microservices architecture (Frontend, API Gateway, Product Catalog, PostgreSQL, Nginx), eliminating 235+ vulnerabilities to achieve 0 Critical, 0 High, and 0 OS vulnerabilities using Trivy and Docker Scout.
- Enforced least-privilege non-root execution (USER 10001) across all workloads with read-only root filesystems and capability drops.
- Configured Nginx API Gateway routing with strict HTTP security headers, CORS origin enforcement, and automated endpoint health checking.

VibeGram — Scalable Media Streaming Platform & Containerized Infrastructure [\[GitHub Repository\]](#)

Technologies: Docker Compose, Redis Caching, Node/Python API, Volume Persistence, Health Probes, SAST/SCA

- Engineered containerized high-throughput social media infrastructure with asynchronous media queuing and image processing workers.
- Configured Docker Compose orchestration with isolated internal bridge networks, volume mounts for persistent media, and automated rolling restart policies.
- Integrated static code analysis (SAST) and software composition analysis (SCA) directly into the pull request merge gate.

Maternity Hub — Emergency Healthcare Telemetry & Cloud Backend [\[Devpost Link\]](#)

Technologies: Cloud Firestore, Real-Time Location Telemetry, AI Triage Microservice, Google Cloud Platform

- Engineered resilient real-time cloud telemetry backend with Firebase Firestore streaming for instant emergency triage and automated alert dispatching.
- Implemented automated health-check escalation policies and high-availability messaging queues for zero message loss during critical alerts.

PROFESSIONAL EXPERIENCE

ORIC Research & Project Intern — Office of Research, Innovation & Commercialization (ORIC) — CUSIT

Peshawar, Pakistan | November 2025 – January 2026

- Assisted in managing university research and innovation initiatives under faculty supervision, preparing technical documentation, grant reports, and project tracking milestones.
- Coordinated university-industry commercialization efforts, technology transfer documentation, and academic research event administration.

Mobile Application Developer Intern — Developers Hub Corporation

Peshawar, Pakistan | June 2025 – July 2025

- Engineered modular cross-platform mobile application interfaces in Flutter with responsive rendering across varied screen sizes and form factors.
- Connected applications to Firebase real-time database and authentication services, enabling live data synchronization and state persistence.
- Debugged runtime client issues, refactored codebase components, and collaborated with senior engineers in Agile development cycles.

Full Stack Developer Intern — Codveda Technologies

Peshawar, Pakistan | May 2025 – June 2025

- Constructed dynamic user interfaces using modern JavaScript (ES6+), HTML5, and CSS3 for client web applications.
- Developed backend REST API endpoints using Node.js to handle secure database CRUD operations and persistent data retrieval.
- Implemented user authentication flows, session handling, and role-based access control (RBAC) mechanisms.

Web Developer Intern — DevSpire Solutions

Peshawar, Pakistan | February 2025 – May 2025

- Developed server-rendered dynamic web application features using PHP connected to structured MySQL relational databases.
- Participated in Agile team sprints, maintaining version control discipline through Git branch workflows, pull requests, and peer code reviews.

HONORS & LEADERSHIP

- **Pakistan Youth Leadership Initiative (PYLI 2025):** Selected for 4-day intensive leadership and social impact program organized by British Council, WaterAid & IDEA Pakistan.
- **6th International Conference on Emerging Trends (CUSIT 2025):** Presented GoDropMe to an international academic panel and served on the official organizing committee.
- **6th Student Talent Expo Peshawar (2025):** Showcased GoDropMe platform innovation, business model, and societal impact to industry and academic juries.
- **Skillathon Competition (CUSIT 2024):** Demonstrated hands-on computer network engineering and network topology simulation capabilities using Cisco Packet Tracer.
